EDUCATION

- Indiana University Bloomington** Bloomington, IN
• *Master of Science in Computer Science; CGPA: 3.950/4* August 2023 - May 2025
Courses: Applied Algorithms, Software Engineering, Algorithms for Big Data, Data Mining, Applied Machine Learning
- BMS Institute of Technology and Management** Bengaluru, India
• *Bachelor of Engineering - Computer Science & Engineering; CGPA: 9.11/10* August 2019 - July 2023
Courses: Data Structures and Applications, Design and Analysis of Algorithms, Object Oriented Concepts, Computer Networks and Security, Database Management Systems, Big Data Analytics, Artificial Intelligence and Machine Learning, Neural Networks.

EXPERIENCE

- Nokia Solutions and Networks** Bengaluru, India
• *Student Intern* February 2023 - July 2023
 - Configured and managed alert handling using Alertmanager for alerts sent by client programmers, and utilized Grafana for querying, visualizing, and alerting on metrics. Enhanced Grafana dashboards by adding workload-level resources and fixing bugs in charts to improve reliability and performance.
 - Added CA Cert configuration in the Grafana data source section to ensure secure connections. Implemented feature enhancements for Grafana dashboards to provide more insightful metrics and reports. Utilized Kubernetes, Docker, and Helm for deployment and orchestration of monitoring and visualization tools.
- Nano Robotics Embed Technologies** Bengaluru, India
• *Technical Intern* July 2022 - October 2022
 - Led the development of an advanced weather forecasting model using multiple linear regression and Bayesian regularization neural networks. Utilized datasets from the Indian Meteorological Department to build and train the model, incorporating subtractive clustering techniques for data segmentation and analysis, leveraging Python and scikit-learn for implementation.
 - Enhanced model performance through iterative testing and validation, achieving measurable improvements in prediction reliability. Submitted detailed reports and created interactive visualizations using Matplotlib, supporting data-driven decision-making.

PROJECTS AND PAPERS

- Blood Registry using Blockchain**
 - Directed the front-end development and supported smart contract creation using Solidity for a web portal integrated with the Ethereum Blockchain. Implemented AES encryption for secure data handling.
 - Part of the winning team in Asia's largest innovation hackathon, recognized for enabling transparent blood information management, ensuring privacy and integrity. Blockchain Implementation for Blood Registry Using Ethereum Network (*Under Review*) – A research paper analyzing the project's implementation and addressing Ethereum's limitations in the context of blood registry management.
- Smart Form Using ML**
 - Created a system to identify and prevent repetitive selection of projects by recognizing closely related titles for our university. Implemented cosine similarity and Natural Language Processing (NLP) techniques to analyze and compare project titles with similar meanings.
 - Developed the application using Django and designed an intuitive user interface to facilitate easy interaction with the system. This project was assigned by our professor, who entrusted us with the task, reflecting the confidence placed in our ability to deliver a functional and reliable solution for the institution.
- Textalyzer**
 - Implemented an extractive text summarization feature using the TextRank algorithm with the Gensim Python library. Designed the tool to condense lengthy articles into shorter, meaningful summaries while preserving key information.
 - Built a QnA system that processes large amounts of text data to answer user queries. Utilized the TF-IDF (Term Frequency-Inverse Document Frequency) algorithm to extract the most relevant answers while maintaining the original context. Integrated the summarization and QnA functionalities into a user-friendly web application using Django.

TECHNICAL SKILLS

- Programming Languages:** Python, Java, C, C++, JavaScript, SQL
- Web Development & Testing:** HTML5, CSS3, Tailwind, JavaScript, React, Node.js, Next.js, Django, Selenium
- Databases & Cloud Computing:** MongoDB, MySQL, AWS (Amazon Web Services), Google Cloud, SQLite
- Data Science & Machine Learning:** PyTorch, Scikit-learn, OpenCV, Pandas, Numpy, Matplotlib
- DevOps & Version Control:** GIT, Docker, Jenkins | **Tools & Platforms:** Postman, UFT, Jira, UIPath Studio, Android Studio, Firebase, Linux

CERTIFICATIONS AND AWARDS

- AWS Certified Cloud Practitioner**
Amazon Web Services (AWS), August 2024.
- Winner, Smart India Hackathon 2022**
Achieved first place in Asia's largest innovation hackathon with the "Blood Registry Using Blockchain" project.
